

# OPAL VALUATION

This **HOT NEW** computer CD "The Smart Chart" will change the opal industry forever! It is the first easy to use computer tool that accurately values opal at today's prices!

It has been designed by Peter Evans, an Australian opal wholesaler with over 30 years experience in valuing opal. Peter is highly respected in the Australian Opal Industry and is Vice President of the Australian Opal Association.

This guide demystifies opal pricing for opal professionals and other trade users alike and **will** become the opal equivalent of the Rapaport diamond price guide!

Users simply click next to a series of photographs that are similar to their opal, describing its type, colour, brightness, pattern, transparency, body colour, spectral combination, display, colour distribution, shape and faults. The program replicates the procedures followed by experienced opal professionals in valuing stones and outputs the price per carat and in total, at wholesale, madeup and retail levels.

It works for all Australian opal types - black, white, crystal and boulder.

In addition to this, the program has a unique opal knowledge base, describing Australian opal types and characteristics to a level of detail never before publicly available.

It also contains tips on how to identify jewellery set doublets, synthetics, boulder doublets and repaired opal as well as a pricing guide to opalised fossils and cracked opals.

Specifications and operation: The Australian Opal Values guide comes on a CD designed to be run in a Windows environment Win98 or later including Windows 2000, XP. (Please note there is no Mac version available at this stage). A computer with CD reader and hard disk capacity with minimum of 90MB free is required. Setup is automated when the disk is loaded.

**Order The Smart Chart now** from this site for only US\$150 including shipping and handling. This is a limited edition release price only and it is expected the price will rise in future releases!

### **What customers say:**

...*"The opals look great - thanks - I also tried out the cd--Wow, that makes it so easy. Love it!" MO Florida.*
